

#### Data Section:

The dataset is a vehicle collision data of Seattle from 2004 to 2020. There are 38 columns and 194673 rows. In this data a severity code is given to each accident based on the 37 features. After some exploratory analysis it can be found that some features have too many missing value which should be excluded, some features were simply not required for the analysis so these features should also be excluded.
